

## 2022 Variable Frequency Drive Rebate Program (CIP #5)

### HOW TO APPLY

---

1. AMU provides energy efficiency rebates for the purchase and installation of variable frequency or adjustable speed drives (VFD or ASD) to control their end use equipment. Drive equipment not listed on this application, may be available through our Custom Efficiency program which **requires pre-approval prior to starting a project**.
2. AMU does not endorse any particular manufacturer, product, or system design by offering these rebates. AMU does not expressly or implicitly warrant the performance of the installed equipment. AMU does not guarantee that a specific level of energy cost savings will result from implementing energy conservation measures or the use of products funded under this program.
3. The customer acknowledges that nothing contained in the application shall impose any liability on AMU for the work performed and information presented by the customer's engineer, contractor, or vendor. AMU is not liable for rebates promised to customers as a result of a contractor misrepresenting the program.
4. A signed application and detailed installation invoice (s) must be submitted to AMU **within 6 months of the invoice date**. Invoice (s) submitted **must** include quantity, horsepower, price, manufacturer's make and model numbers, and product codes for each item, and end use function. Mail the completed forms along with copies of your itemized paid receipt(s) or paid contractor invoice(s) with manufacturer name(s), model number(s), and any other required documentation to:  
Anoka Municipal Utility  
2015 First Avenue  
Anoka, MN 55303
5. The customer understands the program term is April 1<sup>st</sup> 2022 through March 31<sup>st</sup> 2023 or sooner if allocated funds from AMU are depleted. Applications will be accepted on a first-come, first-served basis. If you estimate your rebate to be \$10,000 or more, please call us at **763-576-2904** before submitting your application to make sure funds are still available. This program shall at all times be subject to change or termination without prior notice.
6. AMU reserves the right to inspect customer facility (i.e.) for installation of materials listed on this rebate application and will need access to survey the installed project.
7. The maximum rebate amount shall be the lessor of 60% of the project cost (including equipment and labor) or \$100,000. In no case will the rebate amount exceed the purchased price of the equipment.
8. Make and retain a copy of all materials including application and rebate forms and paid receipts for one year.
9. If all the above criteria are met and verified, you will receive your rebate check as time allows. The customer is responsible for paying the contractor in full. Rebate checks are issued to the utility account holder only.
10. Questions? Check the rebate information on AMU's website or call us at **763-576-2904**.

# Program Specific Rules

---

1. The variable frequency drive program applies only for new equipment. Rebates are not available on replacement drives.
2. Rebates will apply to variable frequency drives in systems that:
  - Are tied to an automated control system
  - The variable frequency drive true power factor must be .90 or greater
3. Approved applications of variable frequency drives are HVAC fans, pumps, cooling towers, process equipment, and industrial fans.
4. Non-approved applications of variable frequency drives are chillers, refrigeration, compressors and air compressors. These applications may be submitted for evaluation through the Custom Energy Rebate program. The variable frequency drive will be evaluated in conjunction with the equipment operating efficiency and loading. Additional applications not approved for variable frequency drive rebates include soft start, power factor correction, or related equipment.
5. Rebate is based on the rated variable frequency drive controlled horsepower or the horsepower of the motor, whichever is lower.
6. Rebates are available for variable frequency drives from 1 hp. up to 200 hp. Variable frequency drives greater than 200 hp. need to be submitted for preapproval since an evaluation is required prior to equipment purchase and installation.

# Variable Frequency Drive Rebate Application

April 1<sup>st</sup> 2022 – March 31<sup>st</sup> 2023

**Important: Annual operating hours and input wattages for old and new equipment must be provided. Rebate forms that are not legible or incomplete will not be processed.**
